

Apendix 1 – How to set up your OpenDomo test environment

If you don't have an [ODNetwork](#) device, to play with RemoteDomo you will need a virtual OpenDomo Network system with odevents running. You can get it by following next steps:

1. Download an OVA to run in VirtualBox from <http://es.opendomo.org/downloads>
2. Execute installPackage.sh odevents from your OpenDomo system or download package from <http://cloud.opendomo.com/repo/1.0.0/odevents-20130522.od.noarch.tar.gz>
3. Check the IP assigned to your VM and Visit web interface of your ODNetwork to setup your system from a browser. Default user and pwd are
